

5.0 throttle cable bracket

CNC machined in the USA from 6061 aluminum and anodized for a durable finish, these MC Machine throttle cable brackets look great and solve several problems when modifying '86-'93 Mustang/Capri EFI 5.0s. They will also fit '94-'95 Mustang 5.0 when running Fox style upper intake, throttle body, and Fox throttle cable (factory elbow deleted). Besides looking clean, they are slotted to allow better cable alignment when using larger diameter throttle bodies. Also, by rotating the cable mounting screw upwards, these MC Machine throttle cable brackets provide increased clearance for tall valve covers. Works with factory cruise control on '86-'93. All fasteners are included. NOW AVAILABLE FOR AOD TRANSMISSION.

- Increased clearance for tall valve covers
- Improves throttle cable angle when running large throttle bodies
- Increased clearance for large AFPR on factory fuel rails
- Works with factory cruise control ('86-'93)
- Light weight
- Anodized in black or gray
- Fasteners included
- Made in the USA

Price includes shipping inside the continental USA, international orders please email for specific shipping quote.
